## PRESS RELEASE

### SOCIAL PROTECTION SURVEY: 2016

#### **Social Protection Expenditure as a percentage of the GDP: 19,1%**

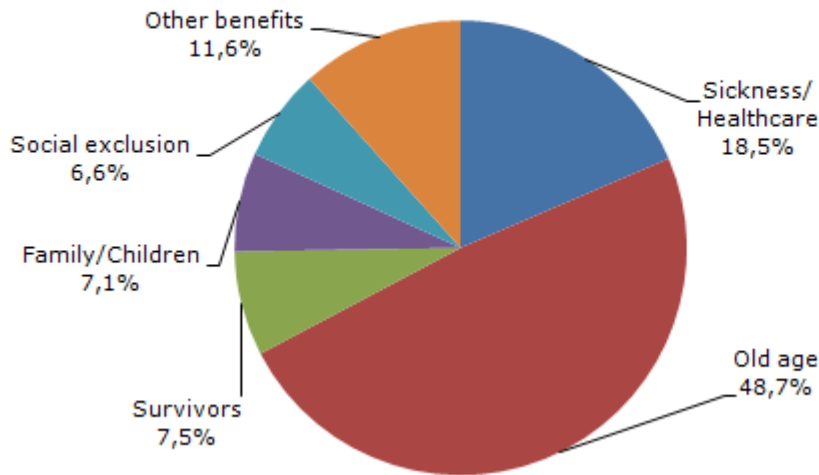

According to the results of the Social Protection Survey, which is based on the principles and rules determined by the **E**uropean **S**ystem of Integrated **S**ocial **P**rotection **S**tatistics (ESSPROS) the social protection expenditure in Cyprus, as a percentage of the GDP, reached 19,1% in 2016, compared to 19,9% in 2015 (Diagram 1), which corresponds to €3.530,3 million in 2016, compared to €3.532,3 million in 2015 (Table 1).

#### **Distribution of Social Protection Expenditure by function**

As it is indicated in Diagram 2, the most significant functions were those of old age and sickness/healthcare, which combined, constituted 67,3% of the social protection benefits for 2016 (compared to 67,4% in 2015). The largest share of old age benefits (which comprise both cash benefits, i.e. periodic pensions and benefits, and lump sum benefits, as well as old age benefits in kind like housing, provision of assistance in carrying out daily tasks and other benefits in kind), concerns periodic pensions which amounted to €1.569,5 million and which constituted 93,2% of the total old age benefits. It is worth noting, that the €1.524,1 million of the periodic pensions that were granted to beneficiaries in 2016, were non-means tested, i.e. without verification of the recipients' financial situation (Table 2).

**Chart 2: Percentage Distribution of Social Protection Benefits by Function, 2016**

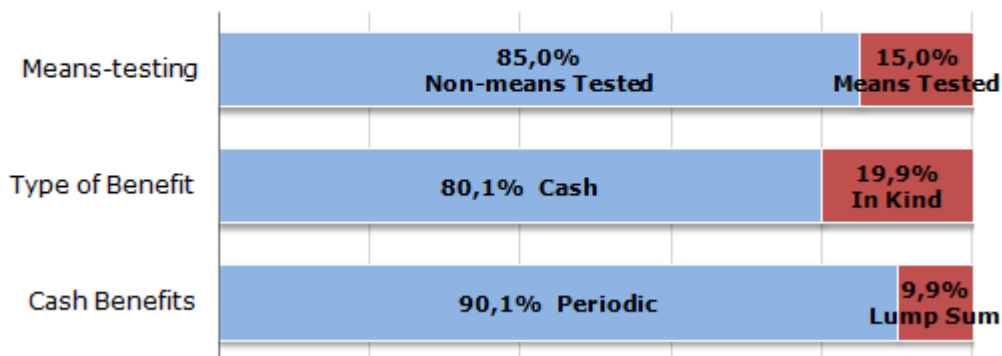

There was an increase in the expenditure of the function of sickness/healthcare in 2016, which amounted to €641,0 million (compared to €606,5 million in 2015), the function of survivors with expenditure amounting to €258,6 million in 2016 (compared to €252,0 million in 2015), the function of family/children which amounted to €244,3 million in 2016 (compared to €241,0 million in 2015) and the function of disability with €145,2 million in 2016 (compared to €123,6 million in 2015). On the contrary, a decrease in expenditure was recorded in the function of old age, which amounted to €1.683,7 million (compared to €1.717,4 million in 2015) as well as in the function of unemployment which amounted to €191,5 million (compared to €215,9 million in 2015). Expenditure on the functions of housing and social exclusion for 2016, remained at about the same level as in 2015 (Table 3).

**Distribution of Social Protection benefits in ESSPROS categories**

The majority of the social protection benefits that were provided to beneficiaries in 2016 (85,0%), were non-means tested benefits. Specifically, this accounts for €2.936,7 million in 2016 (Table 1). In most cases, the beneficiaries, having made cash contributions to various insurance funds (e.g. the Social Insurance Fund), gain the right to benefits, without their income being a criterion. In other words, the majority of social protection benefits are not explicitly or implicitly conditional on the beneficiary's income and/or wealth falling below a specified level. Furthermore, the majority of the benefits in 2016 were cash benefits (€2.769,5 million), whereas benefits in kind constituted only 19,9% of the total of social protection benefits (€686,5 million). As regards cash benefits, 90,1% (€2.494,5 million) were provided periodically, for example pensions and other benefits, whereas lump sum benefits constituted 9,9% of the cash benefits (Diagram 3).

**Chart 3: Percentage Distribution of Social Protection Benefits in ESSPROS Categories in 2016**

**Distribution of Social Protection expenditure by scheme**

The Social Insurance Scheme is the largest provider of social benefits in Cyprus with benefits of €1.423,0 million in 2016, representing a 40,3% share of the total benefits. The contribution of the scheme of Other Governmental Social Protection is also significant, with €645,7 million which represents a share of 18,3% of the total benefits. Then follows the scheme of the Central Government Health Services with €465,9 million and a 13,2% share, the Civil Service Social Protection with €426,5 million and a 12,1% share and the semi-autonomous Social Insurance Institutions with €224,3 million and a 6,4% share. Smaller rates were recorded in the remaining schemes as indicated in Table 4.

## **METHODOLOGICAL NOTES**

### **Survey Characteristics**

According to the relevant Eurostat Manual, 2016 edition, the **European System of Integrated Social PROtection Statistics (ESSPROS)** provides a coherent comparison between EU and EFTA countries, of social benefits to households and their financing. Social Protection encompasses all interventions from public or private bodies intended to relieve households and individuals of the burden of a defined set of risks or needs, provided that there is not a simultaneous reciprocal or individual arrangement involved (i.e. the beneficiary is not obliged to provide simultaneously something of equivalent value in exchange).

### **Goals of the Survey**

The collection of these data aims at the best possible presentation of the information, based on uniform principles and rules that characterize ESSPROS and which are accepted in all EU member states. The Survey on Social Protection conducted by the Statistical Service and the publication of the results, contributes to the drawing of useful conclusions pertaining to our country's policy in this sector, while the results may be exploited in the framework of policy making, taking at the same time into consideration the current situation in the other European countries.

### **Coverage and Data Collection**

The survey covered all organizations, services and insurance funds (autonomous or not) in Cyprus, which offer benefits towards one or more of the Social Protection functions (disability, sickness, old age, survivors, family/children, unemployment, housing and social exclusion). The collection of the data for Social Protection takes place from administrative sources, inter alia, the annual State Budget, selected Ministries' annual reports, the financial reports of organizations that concern social protection (for example the Provident Funds and the Surplus Personnel Fund) and the financial reports of NGOs. For the collection of additional data, the Statistical Service conducted postal surveys, by sending questionnaires to semi-governmental organizations, municipal authorities, Commercial and Cooperative Banks, Trade Unions, Insurance Companies and to a sample of private companies.

### **Social Protection Schemes in Cyprus**

The basic methodology of ESSPROS determines that the total of social benefits are provided through different schemes or functions. These schemes are independent groups of rules which offer social benefits and differ between countries, depending on the structure and operation of the national social insurance system. The social insurance system which is in operation in Cyprus has been subdivided into ten (10) schemes, according to the types and particularities of the benefits. These schemes are:

The **Social Insurance Scheme** comprises the social benefits granted by the Department of Social Insurance Services of the Ministry of Labour, Welfare and Social Insurance.

**Civil Service Social Protection:** this scheme comprises the pension protection of the Government, in its capacity as employer, towards civil servants (pensions and retirement gratuities to all ex-staff of the Central Government).

**Central Government Health Services:** this scheme comprises the provision of medical care and pharmaceutical products in public hospitals and the provision of medical care abroad (where necessary). The services are provided at reduced fee for certain groups of patients such as the elderly, the unemployed, civil servants etc.

**Other Governmental Social Protection** pertains to several types of benefits provided by Ministries towards the covering of basic needs, such as disability, old age, family/children and social exclusion, for the support of the weaker groups of the population.

**Local Government schemes** comprise the benefits provided by the local authorities (municipalities and communities) both for their employees, in their capacity as employer, and for their residents who may face need or risk.

**Semi-autonomous Social Insurance Institutions:** this scheme comprises the collective benefits provided by semi-governmental organizations for their employees, in their capacity as employer, and the sum of benefits of the Provident Funds provided for the employed persons, under the State's supervision.

**Non-Governmental Organizations:** this scheme comprises mainly benefits addressing the functions of sickness, disability, old age and family/children, provided by NGOs for their members and the rest of the population.

**Labour Market Social Protection:** this scheme comprises benefits of semi-autonomous funds or organizations towards the support of employment and the reduction of unemployment, under the State's supervision.

**Employer as Provider of Social Protection** pertains to healthcare benefits provided by enterprises and organizations of the private sector, for their employees.

**Housing:** this scheme comprises public benefits for housing towards the covering of needs of certain groups of the population, like refugees.
